Abstract of **DE19952476**

Detected main pressure (phdist) and detected application pressure (ps2ist) from a secondary disk are recorded as signals on an electronic gearbox control. Actual values or comparative values (phdist-phdsoll) are compared with applicable thresholds (phdmin,pdphdregeldiff) assigned to a range of plausible pressure values for diagnosing errors in the detection of main pressure and/or application pressure from the secondary disk.
